

JULIUS BENEDICT CUANAN

SUMMARY

Has 12 years of solid experience in software development, maintenance, quality assurance and business analysis. Proficient in using NetSuite API, SQL, .NET, Microsoft Azure, Java, JSP, HTML, Javascript & jQuery (with AJAX), Struts. Eight and half (8.5) years of this is solely dedicated to NetSuite technology: SuiteScript (1.0 and 2.x), integration, SuiteFlow, SuiteBuilder, SuiteAnalytics, SuiteTalk, technical requirements document creation, end-to-end solution designing, timeline provision. Has handled more than 30 post-sales implementations and more than 100 scripts and workflows. Also has wide knowledge in terms of functional configurations that make it more efficient when combined with scripting, integration, and workflows.

Recent software development covers the use of NetSuite APIs.

Recent business analysis experience includes requirements engineering and product validation.

Technical Consultant, Netsuite Philippines

40F Tower 2 RCBC Plaza 6819 Ayala Ave. Corner Sen. Gil Puyat Ave.,
Makati, Philippines — Mar 2014 to Oct 2016

PROJECTS

Project Name: N/A

Project Duration: N/A

Client: N/A

Role: Developer and Technical Consultant

Netsuite is a company that lends its software (named as NetSuite) to clients/users.

As a developer, my responsibility is solely doing developer tasks while, of course, assuring that my tasks are bug-free.

As a technical consultant, I am expected to create documents (Technical Requirements Document) and provide estimates for the developer and QA.

Accomplishments

- Timely submission of bug-free (or at least less bugs), under w3 standards, and neat codes; reviewed and tested. Timely delivery of well-reviewed/written TRDs.

Java Developer, Optimum Info Solutions

Solaris One, Dela Rosa St., Ayala, Makati, Philippines — Dec 2013 to Mar 2014

PROJECTS

Project Name: Ambit

Project Duration: Dec 9, 2013 – March 18, 2013

Client: Sungard

Role: Java Developer

Ambit is a web application focused on servicing bank and giving efficient solutions. In the application, the teller (user) can do several banking services such as cash deposits, withdrawals, cheque collections, etc.

My responsibility is solely doing developer tasks while, of course, assuring that my tasks are bug-free.

Accomplishments

- Timely submission of bug-free (or at least less bugs), under w3 standards, and neat codes; reviewed and tested.

Software Engineer, Pointwest Innovations Corp.

Quezon City, Philippines — Sept. 2010 to December 2013

PROJECTS

NOTE that projects are disclosed so only project aliases are used

Project Name: Uranus

Project Duration: Apr 1, 2011 – Dec 15, 2013

Client: A U.S. Airline Company

Role: Software Engineer (Developer & QA)

Uranus is an internal maintenance project of the client wherein employees can do service requests such as reserving for a training room, replacing workstation materials, requesting for an id, etc.

For the months April 2011 to January 2012, my responsibility is to be the QA while doing developer tasks. And after the Uranus Overhaul (we created a whole new Uranus; GUI, cleaner and safer codes, etc.), my responsibility is solely doing developer tasks while, of course, assuring that my tasks are bug-free.

Accomplishments

- Project Overhaul
- Timely submission of bug-free (or at least less bugs), under w3 standards, and neat codes; reviewed and tested.
- Introduced general changes for the whole application to use such as new functions and standards (GUI and code-based).

Project Name: Mensa

Project Duration: Jan 18, 2011 – Apr 1, 2011

Client: A U.S. Airline Company

Role: Software Engineer (Developer)

Mensa is a “conversion” type of project. Old forms that are used for corporate communications are supported by an obsolete technology – FrontPage. The client wants to use a recent technology called SPRY.

Involved in applying spry validations for controls of old forms. Duties include delegation of work training, enhancement

analysis, development/programming and system and unit testing. Technologies used were Spry, HTML, JavaScript, CSS, PHP.

Accomplishments

- Timely submission of bug-free (or at least less bugs), under w3 standards, and neat codes; reviewed, converted, and tested.

Project Name: Apollo

Project Duration: Nov 12, 2010 – Jan 10, 2011

Client: A U.S. Airline Company

Role: Software Engineer (Developer)

Involved in the development of a web-based employee management system that allow bidding and awarding day-offs to all internal employees. Duties include delegating of work, training, enhancement analysis, development/programming and system and unit testing. Technologies used were Java, J2EE, JavaScript, CSS, HTML, JSP, Struts, WebSphere Application Server (WAS).

Accomplishments

- Timely submission of bug-free (or at least less bugs), under w3 standards, and neat codes; reviewed and tested.
