SQL Server

Software Specialist

Part of CHAPO software team and ERP(Microsoft Dynamics 365) Team, Chapo Software development, Chapo office Software Customization/Integration as per the requirements, Technical support of Microsoft Dynamics 365 ERP systems, AZURE VM (Virtual Machines handling), Biometrics system controlling, MIS Reports – Customization of Management Information Systems

Responsibilities:

•Involved in every phase of the life cycle gathering all the key requirements in the project form Design, Analysis, Development, Testing and Deployment of the solution in the MS Dynamics 365 F&O.
•Worked on Organization administration configuration and system setup.
•Involved in system landscape architecture and other administration activities.
•Excellent understanding of AOT elements, X++ programming and able to understand & develop functionality using X++.
•Developed Major and minor modifications in X++ using best practices to allow for simplified future upgrades.
•Installation and Configuration of the Microsoft Dynamics client and business connector.
•Worked on SSRS reports and customizing them.
•Extensively imported data from various sources such as MS Excel and MS Access using Import.
•Performance tuning of Queries using SQL Profiler.
• Worked on security administration and Customization of privilege, duties and roles as per business requirements.
• Created new and improved existing enterprise reports to provide more accurate and meaningful data to upper Management.
• Implemented and customized several operational and financial SSRS reports.
• Designed reusable controls for dynamic configurations.
• Analyzed those instruction which are taking more time & optimized them using X++ code or by enhancing the SQL statement.

Key Involvement :

➡ Technical Involvement

• Operating Azure portal.
• Using X++ code in Microsoft dynamics 365.
• Implementation and Operation of VM (Virtual Machine).
• Operating LCS.
• Bulk update in D365 with excel Add Ins.
• Model , Project with Microsoft dynamics 365.
• Forms in Microsoft dynamics 365.
• Form Action Pane Patterns in Microsoft dynamics 365.
• Checkbox , Combobox , Index Concepts Microsoft dynamics 365.
• Relations Concept in Microsoft dynamics 365.
• Relations Concept with Multiple Tables in Microsoft dynamics 365.
• Join Clause DML Codes in Microsoft dynamics 365.
• Container Date Functions in Microsoft dynamics 365.
• Table Concept in Microsoft dynamics 365.
• Table Types Concept (Regular, TempDB, InMemory)
• Table Deletion Types (None, Cascade, Restricted, Cascade + Restricted).
• Table Group Concept.
• Query Concept
• View Concept
• Map Concept
• Data Entity Concept (Data entity with an Edit in Excel experience)
• Base Enum Concept
• EDT Concept
• SSRS Reports (Query based approach & Data provider approach)

- Menu Item Concept
- Menu Item Type (Action menu item, Display menu item, Output menu item)
- Extensions Concept (Working with form extensions, Table extensions and Menu extensions)
- Methods (Form methods and Table methods)
- Dialog Concept
- Factbox Concept
- Label Setting
- Image Control on forms
- Number sequence creation
- Drop dialog button.

➡️ Customization of forms and reports using X++ code. Involvement:

- PO- GRN- PV Separation
- LTL (Ledger Transaction List)Report
- Subcontract Report
- Open PO Status Report
- Vendor Transaction Report
- Purchase Order Report
- AR (Accounts Receivable) Report
- AP (Accounts Payable) Report
- Vendor Evaluation Process
- Item Master Report
- PR (Purchase Requisition) Report
- TB (Trial Balance) Report
- Vendor Item Report
- Employee All Details Report
- Packing Slip Report

➡️ Functional Involvement
Modules:-
- Accounts payable
- Accounts receivable
- Common
- General ledger
- Human resources
- Organization administration
- Procurement and sourcing
- Product information management
- System administration
- Tax
- Warehouse management.

Software Engineer

Part of Nusyn R&D sotware teamNusyn Signage Software development, Nusyn Signage Software Customization/Integration as per the Client requirements, FIDS Integrations(Flight Information Display System), QSR(Quick Service Restaurant) Signage Integrations, Hospitality Signage, part of Nagpur metro PAS and PIDS application development.

Key Projects involved :

FIDS Integrations(Flight Information Display System): Java web application for AODB database integration (Oracle database) to display flight information in BIAL (Bangalore airport) and RGIA (Hyderabad) airports.
 • Developed web application to fetch Flight Information data from Oracle data base and then display in the respective signage's as per the conditions like arrival flights data, departure flights data, now boarding flights etc
• Also developed application for Kiosk for airline users for broadcasting urgent messages.

QSR(Quick Service Restaurant) Signage Integrations:
Menuboard display integration (MS SQL database) for **KFC** and Haldiram using web technology (j2ee, java script, css, html)
• Developed web application to fetch data from local database of each store and display the product and price available at the respective store Hospitality Signage : full stack web application and web client application to display Hotel room events information on Display Signage for Hyatt Hotels.
 • Developed Web application to fetch data from a given URL and then get the data published in required manner to the Nusyn Clients located at different Hotel rooms, Event areas etc
Metro : Also part of Nagpur metro PAS and PIDS application development.
 • Involved in Metro Software development – the PIDS information system for the Centralized servers and also for the respective station servers.

Nusyn Signage Software Development/Integration :
• Nusyn Client software development for Windows OS, WebOS, Android OS
• Installation and commissioning of Nusyn Software
• Nusyn wayfinder Kiosk software development for touch interactive kiosks
• Nusyn software installation and integration for Chrome OS
• Nusyn client software integration as per client requirement like, selfie concept, data fetching from social media like twitter, instagram etc
